Gesther Michel

Software & Web Development Intern • Available January 19 – April 30, 2027 (15 weeks)

Montréal, QC • gesthermichel02@gmail.com • linkedin.com/in/gesther-michel-aaa76a36a • github.com/GestherMichel

PROFILE

Final-year Computer Science Technology student (software engineering profile) at Collège de Bois-de-Boulogne. I built an asynchronous Python (FastAPI) backend that streams OpenAI API responses in real time and contributed to the Vue.js front end of a housing search platform as part of a team on GitHub. I am looking for a 15-week internship on a web or software development team where I can strengthen my automated testing and deployment skills.

TECHNICAL SKILLS

Languages:	Python • Java • JavaScript • SQL • HTML/CSS
Frameworks & Libraries:	FastAPI • Vue.js 3 • React • Tailwind CSS • Android (Java) • Node.js/Express
Databases:	PostgreSQL • MySQL • MongoDB
Tools:	Git/GitHub (branches, pull requests) • Docker • Vite • Postman • Linux/Bash
Practices:	REST APIs • Server-Sent Events (SSE) • MVC • SOLID principles • object-oriented programming

PROJECTS

Moveout — Housing Search Platform with an AI Agent

Team project (5 developers) • 2025 – 2026 • github.com/thebenoit/Moveout_Project02

Conversational real-estate agent (main chat) / *Python, FastAPI, OpenAI API, SSE*

- Developed the agent's asynchronous backend in Python (FastAPI), calling the OpenAI API to answer users' questions about housing listings.
- Implemented response streaming with Server-Sent Events, so text appears progressively in the chat instead of after the full response.
- Added per-request token counting and API error and rate-limit handling (quotas, retries) to keep costs under control.

Front end / *Vue 3, Vite, Tailwind CSS*

- Redesigned the early-access landing page: restructured sections, added images and videos, and made the layout mobile-friendly.
- Built two reusable Vue components (TypewriterText, TypewriterEraseText) that animate headings with a typing effect.
- Wrote the front-end architecture documentation (views, router, components) and delivered the work through a merged pull request.

Android Mobile App

Course assignment, Mobile Development • Collège de Bois-de-Boulogne

- Designed an Android app in Java that separates the user interface, controllers and data access (MVC).
- Applied SOLID principles so screens could change without touching business logic, making new features easier to add.
- *Technologies: Java, Android, Git*

EDUCATION

DEC (Diploma of College Studies) in Computer Science Technology — Software Engineering (420.B0)

Collège de Bois-de-Boulogne, Montréal • 2024 – 2027

Relevant coursework: data structures and algorithms • object-oriented programming • software architecture • mobile development • databases • computer security • Internet of Things (Winter 2027)

WORK EXPERIENCE

Kitchen Crew Member — McDonald's Montréal, QC • 2023 (5 months)

- Prepared food and assembled orders in the kitchen of a high-volume restaurant while meeting speed, quality and food safety standards.
- Followed precise procedures (cooking times, standardized recipes) to deliver consistent quality on every order.
- Worked as part of a team during peak hours, coordinating with the front counter and drive-thru and adapting to changing priorities.

LANGUAGES

French: native • English: professional working proficiency (technical documentation, written communication)
